

Subject: weird behaviour with cgdemodata

I'm sure there's a good reason why this happens, but it has me very confused:

```
IDL> i = 5  
IDL> print, i, n_elements(cgdemodata(i))  
4      65536
```

Okay, that looks fine. Now what if I put that in a for loop?

```
IDL> for i=0.5 do print, i, n_elements(cademodata(i))
```

...repeat ad infinitum, i.e. until you hit Ctrl-C

What is going on???

-Jeremy.
