Hi --

I am trying to create a for loop in my program, so that I can create 2 plots side-by-side: 1 plot showing half my data (i.e. Nov 1 - 30) and the 2nd plot showing the remaining half of my data (i.e. Dec 1 - 30). Right now, my program is set up to plot the entire data-set (i.e. Nov 1 - Dec 30) on one plot. Any suggestions?

Best, Sarah
