Bill,

ITTVIS support indicate they are unwilling to assist in getting the licence to work on Windows 7 as IDL 6.0 was not designed for this operating system, suggesting i should purchase the latest version of IDL. Well installation of IDL 6.0 works fine under Windows 7 and so do the programmes, it's just that the licence thinks i'm trying to operate remotely, which i'm not. The licence i have is a personal one and should work on any machine i have the use of.

Others must have enconted such a difficulty i'm just wondering if they might share a solution.

thank you,
Neil

Neil,

I, too, feel your pain, but there is probably nothing ITTVIS can do short of giving you a free license for a newer version that will work. This, however, would not be fair to users who have been paying big annual dues to keep their licenses current.

Nevertheless, you have still have options. The simple way to make this work is to install some virtualization software on your machine (e.g., VirtualBox, free), then install Windows XP in a virtual machine running IDL 6.

Haje

Haje,

I installed the Windows XP Mode virtual machine under the Windows 7 operating system, but i get the error message:

"IDL Validation Error
Unable to obtain a license to run as a windows terminal server client"

which almost defeats the object of having a virtual machine.

Any suggestions?

Cheers,
Neil
