
Subject: Green PostScript Background

Folks,

I'm in e-mail contact with someone who every time he makes a PostScript file using my Coyote Graphics commands ends up with a green background color. I run his programs and they work perfectly for me, reproducing *exactly* what we see on the display.

He assures me (I can never tell if this is true or not) that he has downloaded and is using the latest Coyote Library, and he is using a Windows machine, as I am. Everything I can check about his set-up appears to be the same as mine. It doesn't appear to be a PostScript viewer problem, because when he sends me the actual PostScript file he creates, I see the green background, too.

Has anyone ever seen this kind of thing before?

He is in a different part of the world and English is not his native language, so I am not sure that our communication is always as accurate as I would like it to be.

I'm really at a loss for ideas. Any help gratefully accepted!

Cheers,

David
