
Subject: write_gif to stdout ?

Hi there,

I am building an IDL program which will be running offline under UNIX.
Every time my program is run - it produces a .gif image.

Is there any way to get this .gif file to be written to stdout -
rather than saving it as an actual file ?

I notice that LUN = -1 is stdout but WRITE_GIF doesn't specify
LUN, just a filename.

Any ideas ?

Cheers

George.
