
Subject: idl call envi function, running with out ENVI?

I just write a simple IDL program, while the major code write in IDL
with some function of ENVI to speed up my programing.

example:

```
PRO test_read
  COMPILE_OPT idl2
  file_name = DIALOG_PICKFILE(/READ,FILTER='*.*)
  ENVI_OPEN_FILE, file_name, r_fid=r_dem,/NO_REALIZE
  IF (r_dem EQ -1) THEN RETURN
END
```

I hope to release this code running without ENVI, what should I do?

Are you asking how to read an envi file without envi running (ie,
using just idl)? If so that's easy, it's just a matter of the
specifics you need to achieve (ie, do you know the dimensions
beforehand?). Why don't you explain what you want to do a little
better...
