The think is that I would like to create some kind of link as we see in html but in IDL. So a widget\_label with color, underline and of course, the user should be able to click it.

This is not possible. It is possible to hack something like a colored button:

[http://www.idlcoyote.com/widget\\_tips/colorbuttons.html](http://www.idlcoyote.com/widget_tips/colorbuttons.html)

But, I know of no hack for a colored label.

Cheers,

David

I think you would be talking about a button. :-)

Cheers,

David
