You don't want to do this. Send me the data, and
I'll write an article on how to do this correctly. :-)

Cheers,

David

Hi David,
That sounds great!! I'll email the data to you just now :)
Thanks!
Jenny

OK, the proper way to do this is now described in this
article:

http://www.idlcoyote.com/map_tips/landcover.php

I've linked the data sets and a program for displaying the data in the article if people want to play around with it. Like so much satellite data, this data set was weird, probably written incorrectly, and required the programmer to make some reasonable guesses and assumptions to come up with something sensible. In short, it's a real world example. :-)

Cheers,

David
