Folks,

In Coyote Graphics you can create a visualization in a resizable graphics window, then save that visualization so that later you can e-mail it to a colleague or open it again and re-work it, etc. I put this functionality into Coyote Graphics specifically to match functionality I \*thought\* was in function graphics.

But, this morning I am unable to figure out how to do this with function graphics! :-(

Was this just a bad dream I had, or can function graphic visualizations only be "saved" to image files, as the documentation would have me believe?

Thanks!

David
