when i come to the astronomy user's library, it halted at one program
at

```
lambda = Varray (min(filter_w), max(filter_w), 1000.)
```

the error message is that

```
% Compiled module: $MAIN$.
```

```
% Variable is undefined: VARRAY.
```

```
% Execution halted at: $MAIN$
```

i want to know what does this line mean,and how to correct it
