This is nothing more than a very careful application of the usual plotting keywords (Position, [XY]Style, NoErase, etc.) Have a careful read of "Plotting Keywords" in the on-line help before you start.

http://www.idlcoyote.com/graphics_tips/ladder_plot.html

The time axis is a result of using Julian day numbers and the calendar format codes, which can be found, uh, somewhere. I know I've seen them somewhere, but I can't find a reference in the index. You may have to read the manual cover to cover. :-)

Cheers,

David
