There is maybe a "true" solution but

I know the IDL prompt value (!PROMPT) is equal to 'IDL> ' when only IDL is loaded and 'ENVI>' when ENVI is loaded ...

I know that not official at all :-)

Not official, but it works! I'll build in an ELSE clause in case they change it (not that they're likely to, but you never know).

Cheers,

Robin

An other way is to test if the ENVI procedure are set (compiled)

test = routine_info(ENVI_SELECT)

Even better - that's just what I was looking for.

Cheers,

Robin
