
Subject: Printing to command line without a new line

Hi all,

I have a fairly simple question.

My code takes a fair amount of time to run and I would like it to display a percentage number which updates to the command line without starting a new line.

So using print one usually does:

```
for i=0, 100-1, 1 do print, i, '%'
```

but this creates a long list of numbers. How can I stop a newline being created by the print command

I hope this is clear. Does anyone know how to do this?

Cheers
