is there a way to copy the content of an IDL draw widget  
to the clipboard under Windows 3.1 from within an IDL routine?  
I could not find a command or DEVICE keyword to do that.  
Perhaps it's possible to use a DLL call (with CALL\_EXTERNAL).

Any idea?

YES, TRY CTRL-G. A little window will come and say "click twice"  
on the desire plot. This simple operation save the display in the  
Window Clipboard.
