
Subject: replacing blocks in an array with other array values?

hi guys,
I have a 4*4 array, for example, and i want to replace the center 2*2
block of an array with the values in another array

lets say A is 4*4
and B is 2*2
I tried doing `A[1:2,1:2]=B` but it doesn't change anything in A
on the other hand, when I put `A[1:2,1:2]=some scalar`, it replaces the
whole block by that scalar and works

i feel like there should be a simple way to do this but cannot figure
it out
