## Subject: replacing blocks in an array with other array values?
Posted by Ecaterina Coman on Sun, 25 Dec 2011 21:11:02 GMT

hi guys,
I have a 4*4 array, for example, and i want to replace the center 2*2
block of an array with the values in another array

lets say A is 4*4
and B is 2*2
I tried doing A[1:2,1:2]=B but it doesn't change anything in A
on the other hand, when I put A[1:2,1:2]=some scalar, it replaces the
whole block by that scalar and works

i feel like there should be a simple way to do this but cannot figure
it out
