Subject: Where is where?

I wanted to check on a detail of the /Null keyword to the WHERE() function, so I typed in "WHERE" into the search box of the usually reliable IDL 8.1 online help, and was told "No Topics Found". I had a momentary panic that IDL has been changing so much that the WHERE function no longer exists. Fortunately, I found WHERE in the alphabetical list of IDL routines.

Presumably, "where" is not found in the search because it is too common a word.
