Sigh...

This is what happens when you move your mouse button hand from your right to your left to avoid repetitive strain injury, I guess. :-(

Fortunately, I have foreseen problems.

There is a file named cgwindow.old.pro in your Coyote directory. Simply rename your current cgwindow.pro to cgwindow.junk.pro and then reinstate the old one.

I'll get this sorted out this morning.

David

Morning David,

Many thanks for that - all is well now.

I update my Coyote library using SVN - this doesn't include the cgwindow.old.pro file at the moment, so I downloaded the latest zip file and got it from there.

Thanks again for your help,

David

Sorry. This was one of those silly last minute changes that are so simple, you don't even bother to check the program again, even though you KNOW that these are exactly the kind of changes that tend to stick a knife in your back. :-(

Fixed now.
