---

Hello everyone.

I encountered the weirdest bug I ever saw with IDL. I can't say exactly when it happened, but at some point a few hours ago, IDL stopped taking into account anything below one. Example:

```
IDL> print,float(0.25)
```

```
0,00000
```

```
IDL> print,0.25
```

```
0,00000
```

```
IDL> print,-0.12
```

```
-0,00000
```

```
IDL> print,1.2
```

```
1,00000
```

```
IDL> print,1.2d
```

```
1,0000000
```

Please help, I'm going mad...
