Subject: IDL refuse to acknowledge anything but integers...
Posted by Julien[2] on Tue, 27 Mar 2012 14:51:03 GMT

Hello everyone.

I encountered the weirdest bug I ever saw with IDL. I can't say exactly when it happened, but at some point a few hours ago, IDL stopped taking into account anything below one. Example:

IDL> print,float(0.25)
      0,00000
IDL> print,0.25
      0,00000
IDL> print,-0.12
     -0,00000
IDL> print,1.2
      1,00000
IDL> print,1.2d
      1,0000000

Please help, I'm going mad...
