Hi everyone,

I have a contour plot (y axis is ocean depth, x axis is time and temperature of the water column is contoured) in which i have 123 irregular time(data) points. I want to read in column data (which is no problem) from a file :

09 09 2002

09 17 2002

... ..

... ..

12 23 2005 etc... I want to read these columns as month ,day ,year seperately and then generate time labels for the x axis of my plot such as : 09/09/2002 .

There is no regular spacing in between the dates, which is what i could not figure out.

I want to have tickmarks on each date(data point), so my plot will be easy to follow.
