Subject: Acces to the spatial Subset widget In Envi Posted by Vincent Sarago on Fri, 06 Apr 2012 11:54:14 GMT View Forum Message <> Reply to Message

Dear All,

I have an easy question (I hope):

When writing widget with ENVI functions, there is a possibility to use a 'WIDGET_SUBSET' to ask the user to do a spatial subset of images, but this widget is in two parts (see : http://kkrit.com/d/ENVI_4_3/online_help/Compound_Widgets.htm I)

question: Is it possible to ask for only the second part to open?

(e.g. create a button 'Subset' in my widget, witch will call the properly subset widget - this will be as the normal way but as I'm not using the widget_auto_base, Now this makes 3 different widgets)

I hope you "kings (maybe queens?) of IDL" understand my question ;-)

Cheers,

Vincent
