Well, the problem here is that this isn't how you
do multiple plots in cgWindow.

It will create a one page PDF if you don't use
!P.Multi or !Y.OMargin system variables, but instead
set the cgWindow up like this:

   cgWindow, WXSize=900, WYSize=500, WMulti=[0,2,1], WOYMargin=[3,10]

But, that said, when I separated cgWindow from the guts of
the program in cgCmdWindow, somehow the outside margin
keywords got lost!

I'll have to put them back, but I am due to play
my Wednesday night tennis in about 30 minutes,
so I am going to have to do this first thing in
the morning. Sorry for the delay. I'll have it
done by 7AM Colorado time tomorrow. :-)

Cheers,

David

David,

please play two tennis games instead of one. I'll be happy to wait.

Well, it's 7:20. I had to have my usual frustration
with function graphics first this morning! :-)

You can find the updated files here:

   http://www.idlcoyote.com/programs/cgwindow.pro
   http://www.idlcoyote.com/programs/cgcmdwindow__define.pro

Cheers,

David

David, thanks much!
Another thing I noticed that doesn't work is the xtick_get keyword,
when the /Add keyword is present.
Can that be fixed as well? I'd like to store the tick values like
this:

cgContour, data1, Levels=levels, C_Color=c_colors, /Fill, $
   XStyle=1, YStyle=1, /Add , xtick_get=vt

but if I execute:

print,vt

vt is told to be undefined.
