Is "variable" a function?

```

```

Should be?

```
varvid=NCDF_VARDEF(fid,variable[i],[lonid,latid,timid,memid],/FLOAT)  
  
>

It's a good thing that you were using the variable name in the output file, or it would have been impossible to diagnose, although the error message was a clue that a variable name was somehow screwed up.

Ken
