---

I recall that this one popped up before, but I still don't really know what to do about it. Some users of my scripts get the error message under ENVI 4.8/IDL 8.0, some don't and I can't reproduce it on my system. I've been telling them that there must be another MOMENT function shadowing IDL's library function somewhere on their path, but where??

Any advice appreciated. Thanks,

Mort
