Hi,

I was wondering if the "sun symbol" issue could have been solved by anyone.

It's been a while that I try to make it work using hardware font for postscript device (e.g. D. Fanning's ps\_start, font=0). The solutions for this kind of font available on google (e.g. ps\_frag.pro, changing the unicode in /itt/resources/fonts/, etc) are notvery satisfactory because not quite user-friendly...

So, if a good solution has been found, please let me know!;)

Cheers, Bing

Possibly not helping you, but just noting that the sun symbol, planet symbols, and various other symbols were added in IDL 8.2.

I know there are routines people have used, but I'll let people more familiar with them tell you about their favorite.

Mike
