Dear all,

I have written an IDL application that I am trying to integrate into a Siemens nuclear medicine workflow. I have looked at the secondaryCapture example provided and attempted to incorporate that for the I/O of my application. However the IDL runtime complains about a syntax error during a call to one of the DLLs provided. Has anyone got experience with reading, manipulating and then performing a secondary capture of DICOM files in a Siemens e.soft environment and would be willing to give me some tips? I am basically attempting to replicate secondaryCapture with multiple DICOM files.

regards, Jim
