Hi,

I'm trying to get a bunch of my IDL code to work with GDL (on RHEL).

I have encountered that GDL (version 0.9.2) does not recognize the WHERE routine. Am I missing a GDL library? Any advice on how to get around this?

for example, this line no longer works...

```
DOYcol = where(stregex(Header[*], '^DOY$', /fold_case, /boolean), count)
```

thanks,

Karen
