
Subject: Upgrade IDL

Hi

I have discovered a bug in the IDLde when I do multithreading with IDL_IDLBridge and before I write anyone about this I want to upgrade to the latest version (8.2) to see if its still in there. I work with 8.1 and when I let IDL check for a new version or want it to upgrade automatically just nothing happens.

Is the upgrade somehow connected to the license (I'm working with a university license) or can I do it manually somehow?

thanks
