Subject: Reading special sentence in txt file in IDL
Posted by ursa.kanjir on Wed, 18 Jul 2012 12:48:23 GMT

Hey all,

I'm a new user and I would like to create a program that would read exact sentence in txt file (exactly: "acquisition time/date") and later that would read value that is written after ":" that exist in txt file.

I have written the program up to the phase where it opens and reads my txt file, but I just don't know exactly what should I tell so that IDl would read me this numers.

Anyone can help?
Thanks hundred times in advance!
u.
