
Subject: max_value/min_value in the x-axis?

Hi all,

I want to plot something using the PLOT routine and I want to be able to set max_value and min_value on the graph so that nothing above a certain point is plotted. However, for various reasons, I'd quite like to do this in the x-axis, and not the y-axis. I've Googled, but I can't find an easy way to do this; I'm currently thinking that a where statement might be my best bet, but does anyone have any alternative suggestions?
