Subject: IDL Drivers for National Instruments Boards?

---

Does anyone know of a procedure for IDL for a Macintosh which implements the NI-DAQ drivers from National Instruments so they can be called directly from IDL? I'm sure that C code can be written so that they can be called from IDL but I am trying to save myself some time. I am looking for the drivers used for the digital I/O boards.

Any help would be appreciated.

Thanks in advance.
