I have image with map_set in widget_draw. Here is sample code

```
MAP_SET,/STEREO,-90.,0.,/ISOTROPIC,/HORIZON,E_HORIZON={FILL: 0}  
  r=map_image(data,startx,starty,LATMIN=-90,LATMAX=0,$  
    LONMIN=-180,LONMAX=180,COMPRESS=1)  
  TVSCL,r,startx,starty
```

I want get lat/lon values from pixel under cursor. How i can do that ?

Thanks
