For instance a small table. (Maybe this is considered cheating, and not really intended functionality ?) However, when using MARKUP_STYLE='rst', this trick does not work anymore. There are embedding options for graphics and links, but I cannot find anything about embedding HTML code.

Yes, you are right the rst style does not allow HTML embedding, but the other styles (IDL, IDLdoc, and verbatim) do.

One workaround right now would be to use a separate docformat statement for that single file, though that is not very satisfactory for the rest of the comments.

Adding the html directive (and maybe latex as well) as a feature request. They will only show up when using that output type.

Mike

Yes, that is my problem here.

Another possibility is support for some simple markup like textile (<http://textile.thresholdstate.com>) and/or the Wiki formatting system used by trac.
