Hello,

Does anyone know how to fix the issue in reading netCDF 4.1.1 with IDL version 6.1. When I open the file with 'ncdf_open' function, I get an error saying 'NC_ERROR=-51'. Thanks,

Mahesh

Error codes can be found here: http://www.unidata.ucar.edu/software/netcdf/docs/netcdf-c/Error-Codes.html

In the case of -51, the error is a vague message "not a NetCDF file". Usually a simple message like this means that a "magic" number is not located at the very beginning of the file, or some other standard data is not found at an expected location.
