IDLdoc will be able to produce output compatible to what is required by the Doc Center soon, so hopefully some of the labor of updating these library docs (at least the ones with IDLdoc formatted comments) will be eased. I have been working with Exelis VIS to output the correct format and just have a few more details to finish up.

Mike

Oh, this is very good news. Presumably this will be in a machine-readable format that will allow a daemon to sweep the documentation up on a regular basis. This will be good for everyone!

Cheers,

David
