Subject: Quick question... OS Version

Hi,

how can I identify the underlying software version?

I'm asking because under Widget_button, the Image keyword allows to specify an image for menu buttons ONLY on windows 7.

With !Version I get all sorts of info, but I can't tell if it is win 98, xp, vista, 7 or 8.

Am I not seeing something in the info returned in !Version or do I have to spawn the systeminfo command? (I would rather have a direct IDL command)

Thanks,
Helder
