
Subject: fonts in coyote graphics: how to replicate supermongo?

Hi all,

I was wondering if it is possible to use routines in Coyote graphics to create postscript output with a font other than the default. In particular, I would really like the text in my plots to have the same font as those of supermongo.

Does anyone know how to do this?

Thanks!

Sean

I see what you mean, but by the time I got around to this, all the good names were taken. :-)

Cheers,

David
