Hello,

I am trying to create multiple plots using CgWindow command.

```
cgWindow, WMulti=[0,2,3]
```

```
cgPlot, x, y, /AddCmd
```

```
cgControl, output='my.ps'
```

These basic commands work fine, however can't figure out the following steps yet:

1-) How to position the plot axis to the 3rd row and 1st column, instead of 1st row and 1st column?

2-) How to save the file as a letter sized (US Letter, Portrait (8.50 × 11.00 inch)) ps file?

Thanks.
