Hello, I am not an expert of IDL but I use it quite often
as a base platform to run a software to analyze data.

After a recent upgrade of MacOSx to Mountain Lion (MacBook PRO OSX 10.8.2),
many tabs of the IDL toolbar are not anymore active and the tab image
has become shaded (save, cut, undo, compile, ...).

Other tabs look normal, but they are not anymore clickable (Open, Browse).

Other work (New File, Copy Paste...).

This occurs also in the preferences menu.

I upgraded also from IDL7.2 to 8.1, but nothing has changed.

Any idea about of the reason?

Thank you, nando
