This seems related to the new feature listed in Mark's post: "Code is autoindented when pasted into Editor".

Another annoying thing which is new to IDL 8.2.2 Workbench (at least under linux) is that copy-pasting lines will place your cursor at level 0 of indentation after pasting, even if the cursor was at level 1 while copying.

Honestly, I didn't need the "Code autoindentation". I was really happy to do it myself when ready, by selecting the text and using "CTRL+Shift+F"

Fab

I have to stop complaining without prior searching ;-)

In window->preferences->editor, you can remove this functionality.

Hi,
thanks. I found that, but had to go slightly a different way on my system:

window->preferences->IDL->editor

and then uncheck the option "Automatically apply formatting to pasted code"

Thanks,
Helder
