Subject: Majority Filter

Posted by DavidF[1] on Thu, 07 Mar 2013 20:18:39 GMT

Folks,

Has anyone ever written a majority image filter in IDL? I wish to filter out small incorrectly classified pixels floating in a sea of correctly classified pixels in an image, before processing the image further. These pixels have classification numbers, not data values. I can imagine doing it in a FOR loop (or two), but these images are large and I have a lot of them. :-(

Cheers,

David
