Subject: ENVI 5.0 reading MODIS rapidfire images? JPEG/WORLD FILE

Hi,

With ENVI 4.8 I used to be able that read images from the MODIS rapidfire archive in JPEG format. If Envi detected a \*.jgw worldfile it would ask for the projection and I was set to display the images, get geolocation info and overlay a map.. This doesn't seem to work anymore.

Anyone know how to deal with this: How to tell Envi the projection parameters that an image is already in?

Thanks

Axel
