Hello All,

I am writing a script to create HTML files with IDL. In the script I have a PRINTF statement which looks like the following:

```
PRINTF, iunit, '<dt>g Mag:</dt><dd>'+this_gmag+'</dd>'
```

Here this_gmag is a variable that I want to add between the strings. The output comes as:

```
g Mag:  
    12.399
```

In other words, it goes to the next line. I want it to appear on the same line. How do I do this in IDL? Please note that this_gmag is of type string.

Thanks
