Subject: PRINTF format statement Posted by Rohit Deshpande on Fri, 29 Mar 2013 00:58:23 GMT View Forum Message <> Reply to Message

Hello All,

I am writing a script to create HTML files with IDL. In the script I have a PRINTF statement which looks like the following:

PRINTF, iunit, '<dt>g Mag:</dt>'+this\_gmag+'</dd>'

Here this\_gmag is a variable that I want to add between the strings. The output comes as:

g Mag: 12.399

In other words, it goes to the next line. I want it to appear on the same line. How do I do this in IDL? Please note that this\_gmag is of type string.

**Thanks**
