Dear all,

maybe this has been already posted, but I can not seem to find it.

I have a contour plot, and I draw a circle on it (region of interest). Is there a way to blank off the area of the square outside of the circle (I though polyfill, but I can just manage squared polygons) or to just make the contour of the circle (region) of interest?

Thanks!

PS: the contour data is created through triangulate and trigrid.
