Hello,

I am using the command

```
> ENVI_OPEN_DATA_FILE, fname, /SRTM, R_FID=fid1,/NO_REALIZE
```

to read STRM DEM files.

Sometimes, I am getting a Window saying "This SRTM .hgt file contains missing data points. Would you like to correct these missing value ?"

Is there a way to avoid this message ? For batch processing...

Thank you,

Francois Leduc
