I.e., if this is allowed

```
a = {}  
b = {}
```

then shouldn't this be allowed?

```
c = create_struct(a, b)
```

Hi Matthew,

there are many situations where !null isn't working as smooth as it could. Here is a workaround for your problem:

```
a = {}  
b = {}  
help, (hash(a)+hash(b)).toStruct()
```

```
<Expression> UNDEFINED = !NULL
```
