Hi there,

I'm using Markwardt's CMSAVE and I'm having problems saving structures that include a 2-D array:

```
my_struct = {a:1, b:2, c:make_array(544,8, /byte)}
cmsave, data=my_struct, file='C:/Documents/test.sav', /verbose
% CMSAVE: CMSAVE version 1.16
% CMSAVE: CMSV Library version 1.7
% CMSAVE: Portable (XDR) SAVE/RESTORE file.
% CMSAVE: Saved variable: A.
% CMSAVE: Saved variable: B.
% CMSAVE: Expression must be named variable: <BYTE   (Array[544, 8])>
```

How can I fix this?

Thanks!
