
Subject: Subscripts with greek symbols

Hello everyone,

I am trying to create a plot with axis titles that have greek letters and greek subscripts, however I'm having a hard time trying to get it to do what I would like it to do. In tex-speak, I want it to display something to the effect of " Ω_{Λ} ". Presently if I do something like

`cgplot, findgen(10), findgen(10), xtitle='$\Omega_{\Lambda}$',` this literally writes the word ' Λ ' in subscript terms.

What is the correct procedure for producing " Ω_{Λ} " or any other greek letter for a subscript/superscript?

Any help would be greatly appreciated.

Many thanks,
Harish
